

PDF Command Line Suite

PDF Command Line Suite is a set of programs for the command line that process PDF documents individually and in batch mode. It enables you to process PDF documents easily without any programming effort on various operating systems. Typical processing steps include merging and splitting PDF documents, creating bookmarks, extracting text or applying a company logo. It also performs tasks such as assembling or personalizing PDF documents and form filling.

Product Variants

Properties and Benefits

PDF Command Line Suite is particularly suitable for system integrators and technical consultants. It enables existing PDF documents to be processed efficiently and swiftly in accordance with project requirements without any adaptations to the customer's existing infrastructure.

Areas of Use

Document Preparation

The creation of PDF documents containing numerous reports is commonplace. Now imagine creating one report per customer. This is achievable in one simple step with the pdsplit program.

Merging various source documents and applying a company logo is another example. This task is achieved with the pdcat program.

Other Areas of Use

- Preparing documents for printing and dispatch
- Personalizing documents in web server applications or in batch processing
- Completing form fields in batch processing mode
- Document assembly, i.e. splitting and merging pages such as title page and blank pages, as well as enriching pages by adding logos, page numbering and other content

Platforms

Operating Systems

- Windows 2000, XP, Vista, 7
- Windows Server 2003, 2008, 2008 R2 – 32 and 64 Bit
- HP-UX – 32 Bit and Itanium
- IBM AIX – 32 and 64 Bit
- Linux (SuSE and Red Hat on Intel)
- Mac OS X
- Sun Solaris

Product Variants

- Shell (command line for batch processing)

Performance Characteristics

- Processing individual PDF documents
- Processing large volumes in batch mode
- Variety of functions
- Flexibility thanks to numerous control options
- Easy to use with no programming effort
- Ready to use without adaptations to existing infrastructure
- High performance
- Platform independent

Functions

PDF Command Line Suite consists of various specialized command line programs that can be used without any programming effort. They can be concatenated – for instance, if documents in a batch process should first be checked for content prior to merging.

- PDF Merge Program for merging multiple PDF documents
- PDF Split Program for splitting a single PDF document into multiple PDF documents
- PDF Select Program for reading out selected pages
- PDF Text Extraction Program
- PDF Form Filling Program for simple form-based functions
- PDF Web Link Program for inserting web links
- PDF Table of Contents Program for creating tables of contents
- PDF Bookmarks Program for reading out and creating bookmarks
- PDF Info Program for listing document properties such as the number of pages or page dimensions

The user manual contains a detailed list of all programs.
