

News Flash – June 10, 2004

NEW Production Release Available !

Since our last news flash back in March **pdf-tools.com** has introduced quite a number of new exciting tools. We have also put significant efforts into our existing tools which shows in our new production releases and even our ordering system and evaluation kit access have been replaced by an all new ordering system.

With this news flash, we would like to draw your attention to two particular items:

1. Our New 2.36 Production Release
2. The All New Ordering System

New 2.36 Production Release

(http://www.pdf-tools.com/en/support_releasenotes.html#Release_2.36)

pdf-tools.com is excited to announce its new 2.36 production release of its CLASSIC PDF Tools such as the PDF Library (LIB & LBE), the PDF Prep Tool (PT & PTE), the PDF Command Line Tools (CLT & CLE), the Form Filling & Flattening Tool (FF), the PDF Image Import Library (DIB) and many more.

This new release not only contains the latest patches, but it also offers new features and enhancements such as:

- Form feed control for shell based text to PDF converter (txt2pdf)
- Full screen open mode option for shell based pdcat function
- Support to create and use named destinations
- Support of crop boxes

For more information, please visit the 2.36 release notes.

New Ordering System

pdf-tools.com offers over 40 professional PDF programming tools today on multiple platforms. Our earlier product order list was simply getting outdated for such a wide range of tool options, which led us to introduce a new on-line ordering shop. Product licenses and evaluation kits can now be obtained very easily and we have also improved the information content. Feel free to browse our new shop and download evaluation kits – and don't hesitate sending us your feedback – we would very much welcome it!

RUMOR: Many PDF documents out there unfortunately do not follow Adobe's PDF standard. What if you could check if your PDF files are compliant and if not, fix them?

Previous Highlights

Highlight #1
