

PDF Tools AG – Press release

PDF & PDF/A technology **final release 4.6** from PDF Tools AG

Bachenbülach, February 10th, 2016 – *PDF Tools AG publishes a final release for its PDF and PDF/A components and solutions twice a year. The new release 4.6 of PDF Tools AG includes numerous enhancements and two new products.*

The **3-Heights™ PDF Toolbox** is a new API component that enables the automatic creation of PDF/A-compliant documents from different sources. The PDF Toolbox can be used, for example, to compile individualized or personalized files, in order to facilitate the distribution and administration required for further processing.

Intended for the creation of standardized PDF/A files from scanned images and images received by fax, the **3-Heights™ Scan to PDF Server** by PDF Tools AG is a solution that fulfills all essential requirements, such as small file sizes, the ability to search within a file and embedded metadata. The service performs all tasks that may be delegated to it by local scanning stations.

The key enhancements in this new release can be found in the **3-Heights™ Document Converter**, the **3-Heights™ PDF Optimizer** and the **3-Heights™ Document Viewer R2**.

The **3-Heights™ Document Converter** has been overhauled and the two licensing options (SME & Enterprise) optimized to meet the requirements of target groups. This tool by PDF Tools AG facilitates SME entry into PDF and PDF/A-compliant document processes. The company-wide solution converts documents from various sources into PDF or PDF/A format via a central service, with options such as encryption and digital signage if required.

Further information about the new products and enhancements is available in the current [release notes](#) and on our [website](#).

Company profile

PDF Tools AG is a leading global provider of software solutions and programming components for the creation, editing, reproduction and archiving of PDF and PDF/A files. The company was founded in 2002 by the internationally renowned expert Dr. Hans Bärffuss. Today, PDF Tools AG has more than 4,000 customers in 60 countries. In addition, the company's PDF programming components and tools are employed every day by thousands of users around the world through an international OEM partner network.

The company provides PDF standard solutions and components that are renowned for their scalability, high performance and platform independence. The software is suitable for servers and individual workstations. The architecture is designed for the efficient processing of large volumes of documents. The technologies are used by developers, integrators, consultants and large-scale IT departments for their information and document processes. OEM partners incorporate the technologies into their own products and solutions in order to enhance them. PDF Tools AG is the Swiss representative on the ISO committee for PDF/A and PDF 1.7.
